NORDIC RECMOBILE

PORTABLE AND WIRELESS

Recording and Debriefing System

Nordic RecMobile is a portable recording system in a handy, wheeled protective bag for recording simulation exercises anywhere.

Nordic RecMobile is one of Nordic Simulators' recorder product family, which is controlled by the easy-to-use Nordic Recorder software. Three separate cameras with magnetic fastening are included. The software has no annual licensing fees.

The product has been developed in collaboration with professionals in the simulation world, resulting in a high-quality, very easy-to-use and versatile system. Nordic RecMobile can be set up for use in 10 minutes.

Nordic RecMobile uses high-quality, wireless HD digital cameras with built-in microphones. The cameras have infrared lights, so that the system can record in the dark if needed. Night videography can be used, for example, when practicing for special conditions in military field medicine or during power outages.

The fully wireless Nordic RecMobile also runs on battery power, making it completely mobile. With magnetic attachments, the cameras and batteries can be quickly attached to different locations.

Complete mobility with wireless, battery-powered recording system.

NORDIC RECMOBILE

SOFTWARE

The software captures several streams wirelessly and simultaneously (HD-quality cameras, sounds and vital monitor information). Important teaching points can be chapter marked in the recording during the training. The
chapter marks can be checked directly in the debriefing, so there's no need to review the entire training session. You can also write down your
comments to accompany the chapter marks and use presetted symbols that assist in the debriefing.

During debriefing, you can freely choose the camera view you wish to follow or the microphone recording to playback.
You can also use line-in audio or our wireless microphones.

RECORD ANYWHERE

Record anywhere, anytime with our truly wireless and battery-powered recording system.

EXPANDING WIRELESS NETWORK RANGE

Meshpoints can be used to extend the range of the Wi-Fi network.

Connect the meshpoint to a power outlet. The device will automatically connect to the Wi-Fi Router. Preferred places are rooms near the training area.
Signal strength can be seen on the meshpoint.
