RECORDING SYSTEMS

Nordic Move

FIXED SIMULATION RECORDING AND DEBRIEFING SYSTEMS For Training and Education

Nordic Recorder and Nordic VALT are easy-to-use, comprehensive simulation recording and debriefing systems that are permanently installed in learning environments.

Nordic Recorder is a cost-effective system for small and medium-sized spaces.

With Nordic VALT by Intelligent Video Solutions, we can implement a learning environment that encompasses the entire building.

PORTABLE AND WIRELESS Recording and Debriefing Systems

Nordic RecMobile and Nordic SimplyRec are completely separate, wireless and portable recording and debriefing systems that also run on battery power without the need for an external power source. The equipment is easy to set up and deploy in approximately 10 minutes. Both systems utilize the same, intuitive recording software as the permanently installed Nordic Recorder.

The compact Nordic RecMobile device assembly comes with a small, wheeled protective bag.

Nordic SimplyRec is packed in a backpack and is easy to take with you for small-scale, changing situations.

Record videos as easily as on your phone, but from multiple angles at the same time.

The stylish Nordic Move furniture runs lightly on its own wheels from room to room. The Move has a built-in high-quality sound and video system with speakers and a projector integrated into the stylish furniture.

VIRTUAL REALITY FACILITIES SOUND AND SPECIAL EFFECTS

NORDIC
ENVIRONMENT

TRAINING FACILITY

Nordic Environment is a video wall that effortlessly creates versatile image and video environments to enhance the realistic experience of exercises.

The Nordic Environment video wall makes it easy to convert outdoor exercises into indoor exercises or to role-play social situations.

The multi-projector training environment creates an impressive experience for both large and small facilities.

Premade background videos and photos come with the system, making it easy to create different environments for training sessions. You can also create backgrounds suitable for your workouts with the included 360 camera.

NORDIC
SOUNDBOARD

SOUND AND SPECIAL EFFECTS

Nordic SoundBoard is a mobile sound system designed to create background sounds to support simulation exercises.

The system is controlled from a tablet on which a connected Bluetooth speaker can be battery-powered or permanently installed.

The hardware includes a wide range of pre-recorded sound libraries. Nordic SoundBoard also allows for the customer to record and play their own customizable sound effects.

NORDIC
SMARTWINDOW

VIRTUAL WINDOW

Nordic SmartWindow is a virtual window that allows a control room view to be created in a location where an actual window cannot be built.

A one-way observation window is required between the training room and the control room. In some situations, it is not possible to build an actual window if the wall material does not allow for it or if it is prohibited by building regulations.

The solution is then Nordic SmartWindow, whereby a local projector is installed on the side of the control room and a special camera on the training room side, so that only a small hole in the wall needs to be drilled for the cable.

With SmartWindow, the training room does not have to be next to the control room. Several training rooms can also be controlled from a single control room using the SmartWindow.

SERVICES

CONSULTING, DESIGN AND IMPLEMENTATION

We Are Here to Assist You With Your Simulation Facility Design

We have almost 20 years of experience in healthcare education. This is important when designing the functionality of simulation training facilities together with the customer. Our expertise is based on years of experience from different simulation centers around the world.

Completed all at Once

First, we look at the customer's needs from an educational point of view, based on which we create a technical plan for the equipment.

The basic package includes a 2D design for the devices and layout of the learning environment. The visualization package includes 3D modeling of the learning environment.

The 3D visualization allows for familiarization with the future learning environment even before the construction phase is completed.

CUSTOMER AND OPERATIONAL TRAINING

We Will Ensure That You Will Have Certainty on Using Your Simulation Equipment Efficiently

It is important to us that the equipment we supply are handed over to you with adequate user training. Our training is technical guidance, hardware and software related, not pedagogical training. We are also happy to tell you about the latest trends and events in the industry.

We recommend that the group size of the participants be about 10 people per user training, so that everyone can see and hear the presentation and the interactivity works. The number of groups to be trained is agreed on a case-by-case basis.

MAINTENANCE AND TECHNICAL SUPPORT

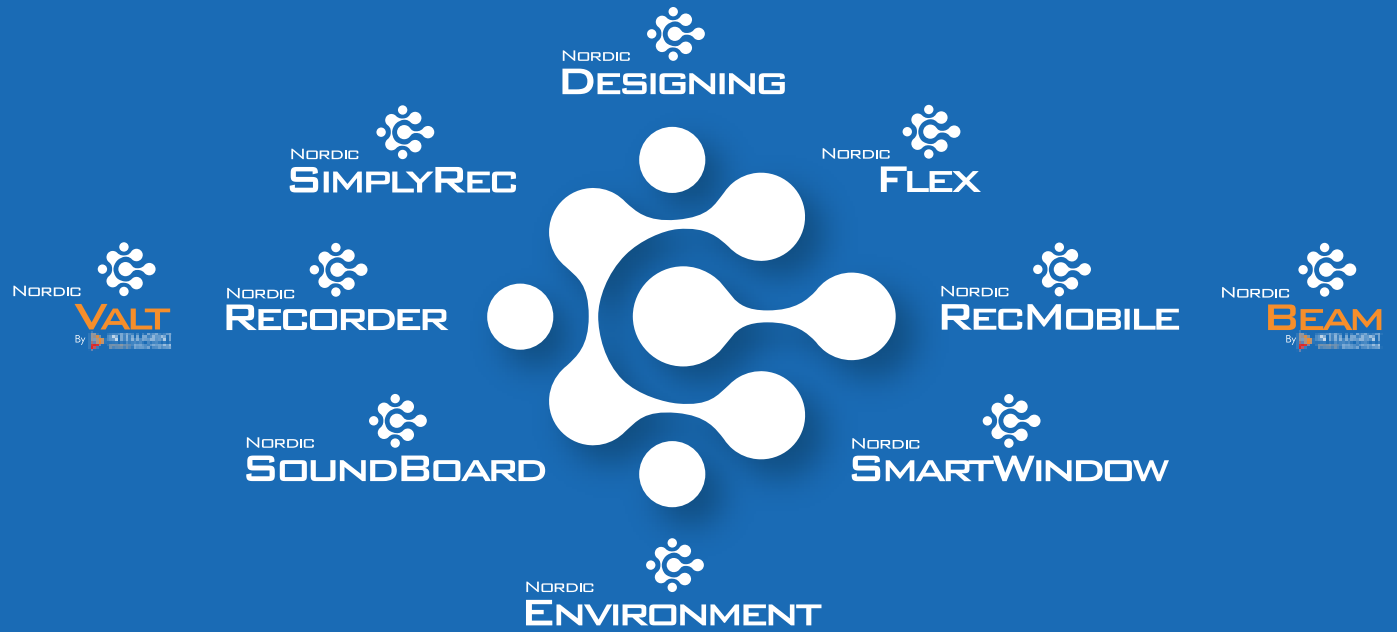

Reliable Maintenance and Technical Support Ensures Uninterrupted Simulation Center Operation

With careful and regular maintenance, the service life of your equipment can be extended many times over. With reliable maintenance, you can also count on your training plans to be kept on schedule.

We respond to service requests quickly and our service managers will assist you personally, individually and on a case-by-case basis. Our services also cover remote maintenance performance.

You have the option to sign up for an extended-care agreement with our service, which will guarantee years of carefree training activities.

Our technical experts will also be available to assist you with any questions you may have regarding equipment use.
